

Introduction

The Palestine token is a charitable cryptocurrency that is intended to promote awareness of the Palestinian cause and assist Palestinians in need of urgent humanitarian relief in the decentralized finance community and donate its proceeds towards this worthy cause.

In the past month, Palestinians have been called to duty on multiple fronts. First and foremost in Al-Quds (East Jerusalem) where the indigenous Palestinians are being evicted en masse to make way for neo-colonial Zionists settlers as they have previously Judaized the western bit unchecked and unbeknownst to the international community.

Secondly, the Haram el-Sharif enclosure, Dome of the Rock, and the Al-Aqsa have been degraded by the incursions and projectiles of Israeli security forces innumerable times in the past few weeks.

Thirdly, in order to “quell the unrest” the Zionists began to regulate the ingress of Palestinians to the Old City and the third holiest site in Islam. Individuals who sought entry to the Old City via Damascus Gate primarily juveniles though including autochthonous denizens from all walks of life in Palestine were accosted by Israeli border police in combat attire. Untold Arab youth have been incarcerated. Similarly, thousands have been maimed and blinded in clashes with the Zionist far-right and by lethal preventive measures undertaken by the villainous Israelis police.

Likewise, when the beleaguered in the Gaza Strip dared evince solidarity with their incapacitated compatriots in Al-Quds and their outrage at the defilement of Al-Aqsa they were bombarded with weapons of mass destruction, targeted indiscriminately by drone strikes amongst other tools of execrable means. The slaughter and ethnic cleansing of awesome proportions with scores of innocents strewn amidst the carnage have drawn sympathy from all quarters of the globe to the Palestinian cause has emboldened the struggle and shall not cease until the dismantlement of the Zionist Entity! We have nothing to offer but blood, toil, sweat, and tears as we empathize with the plight of our brethren in Palestine, inshallah!!!

Our Objectives

We aim to create a tokenomics-less, charitable token intended to embellish Palestinian identity and culture for the cryptocurrency community.

BNB

BNB, otherwise known as the Binance Coin, is a cryptocurrency like Bitcoin that can be used to trade and pay fees on the Binance cryptocurrency exchange. The Binance Exchange ranks as the largest cryptocurrency exchange around the world as of January 2018, facilitating 1.4 million transactions per second. Binance Coin (BNB) was created in July 2017 and worked initially on Ethereum Blockchain with the token ERC-20 prior to being the Binance Chain's native currency.

Binance Smart Chain

Binance Smart Chain (BSC) can best be described as a blockchain that works in conjunction with Binance Chain. Unlike Binance Chain, BSC offers smart contract features and EVM (Ethereum Virtual Machine) support. The design goal here was to keep Binance Chain's broadband intact while smart contracts were introduced into its ecosystem. Since the BSC is compliant with EVM, it has been released supporting the world of DApps and tools from Ethereum. The two blockchains essentially work side by side. It is worth noting that BSC is not a tier two or off-chain solution for scaling.

BSC will be Palestine token's Charging Station. BSC has a full-fledged and mind-blowing environment for developing pumped-up and amazing decentralized applications — like SafeMars. Its cross-chain compatibility with Binance Chain will give Palestine token HODLers the best of all possible worlds.

NFTs

NFTs stands for non-fungible tokens. Intriguingly enough, the NFTs function like other tokens, but they cannot be divided which means NFTs cannot be sent fractionally, unlike Bitcoin (BTC) and Ethereum (ETH), which can be sent fractionally. An NFT is a symbolic copy of a digital or other assets. They are like stablecoins. Of course, NFT's properties make it suitable for use in games, artwork, real estate, and other collectibles.

Palestine token uses NFT technology for tokenizing Palestine token tokens to provide strong proof of ownership that can be safely stored and easily transmitted and cannot be copied. We will begin to create NFTs for giveaways and sales for the benefits of our investors.

Charitable Causes

Charity as a new alternative financial instrument has been a focus of interest during the last decade. The scope of crowdfunding is expanding day by day, from small events and shows to the production of first-class products to large construction and city projects. Crowdfunding has also enabled individuals and corporate bodies to take part in charity works, the challenge of which has been in raising funds in today's financial industry, and blockchain industry projects have also received ample liquidity through crowdfunding.

At Palestine token, we will create a crowdfunding platform for charities where people and crypto projects can donate crypto to help people in difficulties, disasters, poverty, etc.

Tokenomics

The owner simply donates from his own holdings.
